To Clients of Medinotes:

Ref: Charting Plus™ Version 4.5

The HIPAA Academy certifies that the MediNotes Charting Plus™ EMR software version 4.5, when installed and implemented according to vendor specifications, will allow an organization to meet the appropriate requirements of HIPAA Privacy and Security regulations.

The Charting Plus software reflects the security conscious attitude of the management of the company. The security in the application for user access to ePHI is uniquely robust requiring encrypted user keys and strong passwords with minimum character counts. The product features layered role based access to ePHI and patient demographic information stored in the client database. The default settings of the product comply with requirements and addressable specifications of the HIPAA regulations and would lead to customer compliance with HIPAA legislation within the role of this application. Existing computer technologies and industry vendor interfaces do not allow complete compliance with all HIPAA regulations such as full encryption of ePHI at all times. The product is required to work in a cooperative manner with other vendor products running at client sites and cannot encrypt transferred data unless other vendors accept it. The intent of MediNotes management is to incorporate as quickly as feasible all capabilities that will allow full compliance with HIPAA Privacy and Security regulations.

Please do not hesitate to contact me if you need further information. I can be reached at 877.899.9974 x20 or you can e-mail me at Bob.Matthews@HIPAAacademy.Net

With warm regards,

Bob Matthews
HIPAA Services Manager
